

SUBJECT: Extrusion tools and punching plant for cable ducts type POVI 10.000

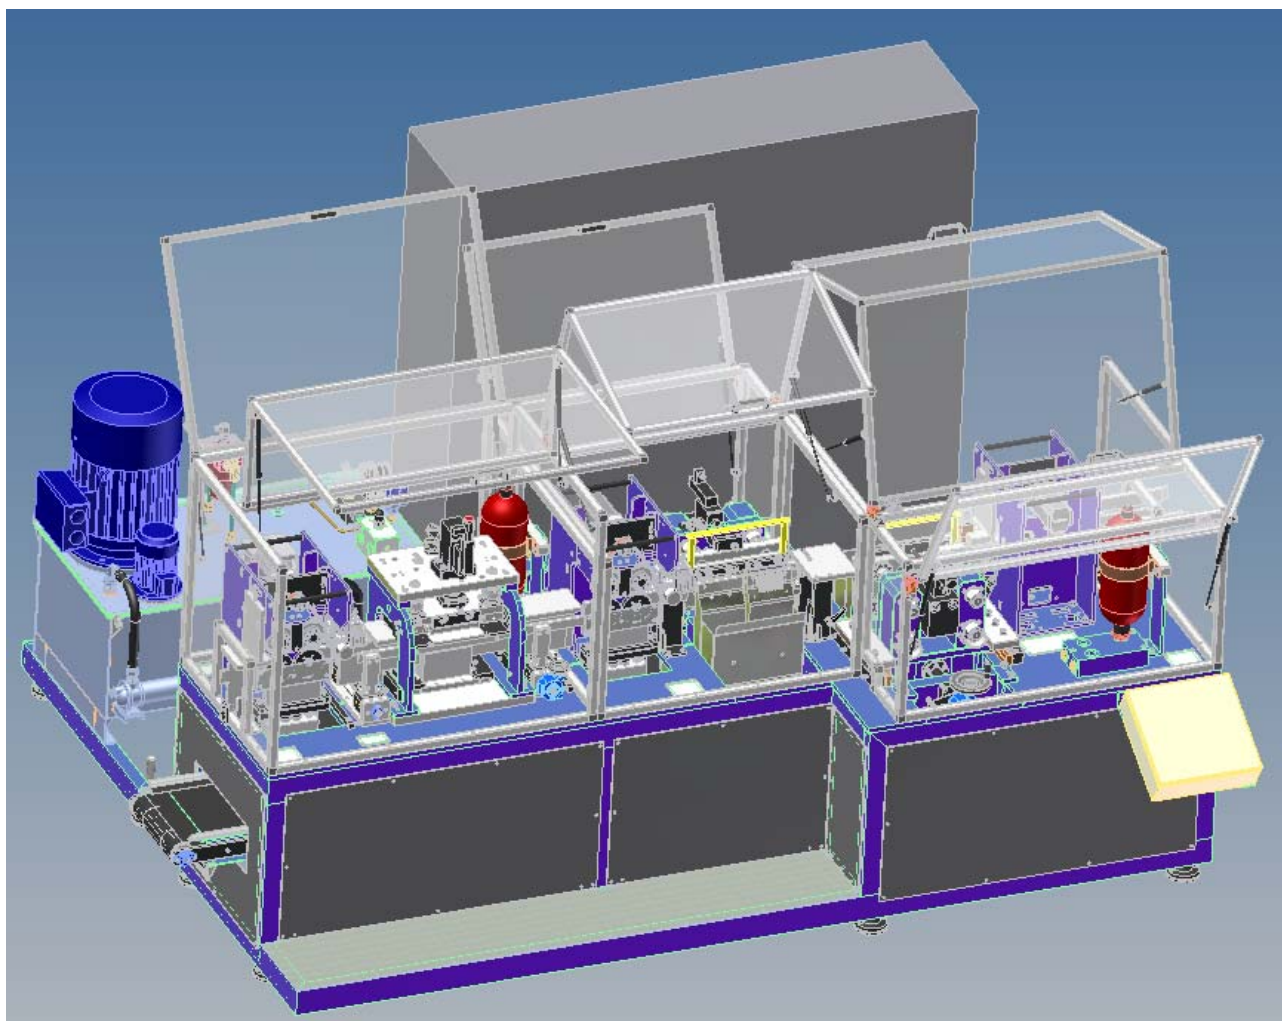

Dear Sirs,

We are glad to inform you that in the next months we will tune 14 extrusion tools and a plant for the punching and coining of cable ducts for the electric industry, equipped with punching/coining tool sets especially manufactured for the lateral punching along the sides and the vertical punching on the bottom. This plant is illustrated in the 3D image on the next page.

We would like to underline that thanks to the experience we have acquired in the course of our 50 years of activity as well as to the high number of plants of this type we have already delivered to the main international cable duct manufacturers, we have become world leader in this type of technology.

We believe that this demonstration is an opportunity you simply cannot miss, as beside visiting our company and seeing the plant working, you will have the opportunity "to touch with your hands" the state of the art in this type of technology.

Example of standard plant for the punching and coining of cable ducts for the electrical industry

Beside standard plants we have also manufactured several customized plants especially developed to meet our customers' specific requirements. For additional details enclosed please find the product sheet of our cable ducts punching and coining plants type POVI 10.000. For more general information both on our company and products please visit our web site www.baruffaldi.eu.

We shall be glad to welcome you in our company and to show you our plants working.

Looking forward to receiving your reply we send you our best regards.
