No more cutting dust!

NEW-PATENTED GUILLOTINE CUTTING SYSTEMS

Dear Customer,

Do you want to eliminate cutting dust from your production lines?
Do you want to eliminate the noise of your cutting saws?
Do you want to eliminate the cost of dust disposal?
Do you want to eliminate maintenance costs?

Moreover:

Do you want to save the material that is lost during the cut with the traditional saw blade?
Do you want to save on the labour of the operator who handles the profiles to blow and clean them?
Do you want to save on the energy consumed by your dust extractors?
Do you want to save on the costs related to safety?

THE SOLUTION YOU NEED IS THE PATENTED GUILLOTINE SYSTEM:

We studied and developed with success our new guillotine cutting systems, both with cold and heated blade that are innovative for simplicity, flexibility, reliability and quality of the cut.

We manufacture stand-alone units, to set up in your existing extrusion lines, but also cutting groups to be assembled on your cutting saws, either using frame and carriage of your existing machine or coupling your saw blade cutting device with the new group.

In addition, if you need to make precision cuts off line, we can offer you the cutting group to be installed on your work station, or supply you with a machine complete with frame, measuring stick and mechanical retainers for a precision cut to measure solution.

Guillotine cutting assembly

Example of a stand-alone guillotine for the extrusion line

We offer you the right solution for your needs:

Stand alone machines and cutting groups with cold or heated blade, for off and inline applications, capable of cutting profiles with a different geometry and thickness and produced with various materials at an extrusion speeds up to 18 m/min.

For further details we invite you to browse through our web site www.baruffaldi.eu, unload the guillotine technical sheet from the down load area and have a look at the numerous solutions our company can offer you.

Looking forward to receiving your enquiries we send you our best regards.
